

SOURCING AND SUPPLIER DECISION DEMO

Supplier performance, risk and commercial terms in one clear decision view.

This example shows how performance, capacity, commercial conditions, risk, ownership and next actions can be organised for review. All supplier codes, values and percentages are illustrative. The documented evidence behind the model includes 30+ suppliers, 2,000+ ERP records and one commercial-data issue affecting 100+ items.

decision actions

1

structured review model

1. SOURCING VIEW: EVIDENCE TO DECISION

Area	Relative share	Supply / commercial signal	Decision input
Materials & components	High	High concentration; lead time rising; quality stable	Dual-source recurring items and validate capacity before peak demand.
Surface / special processes	Medium	OTIF 86%; variable capacity; framework coverage 58%	Rebalance volume and negotiate capacity and call-off structure.
Testing / inspection	Medium	Specialist capability; documentation-sensitive	Validate approved capability, evidence requirements and turnaround time.
Recurring production needs	Low	Stable service; excess stock exposure	Adjust order cadence and minimum-stock logic.

2. EXCEPTION-BASED SUPPLIER REVIEW

Supplier	OTIF	Lead	Cost signal	Risk / next action	Owner / due
SUP-A01	96%	8 wks	slight rise	Stable. Review contract coverage at renewal.	Buyer / 14 Aug
SUP-B07	82%	12 wks	material rise	Capacity risk. Validate alternative and recovery plan.	Buyer + Ops / 7 Aug
SUP-C03	90%	6 wks	small decline	Quality deviation open. Hold volume shift pending closure.	Quality / 5 Aug
SUP-D11	98%	4 wks	stable	Potential preferred source for recurring low-risk demand.	Buyer / 21 Aug

DECISION QUESTIONS

What changed? Is the source reliable? What is the impact? What must be decided? Who owns the action and by when?

CONTROL PRINCIPLE

A dashboard does not decide. It brings evidence, assumptions, exceptions, ownership and approval status into one place for review.

CONTROLLED ANALYSIS AND RESPONSIBLE TECHNOLOGY

Technology supports the workflow. The decision stays with a person.

A simple way to use reporting, automation or AI to speed up preparation without giving up source checks, commercial judgement, supplier selection or final human approval.

CONTROLLED WORKFLOW

CONTROL BOUNDARIES

EXAMPLE MANAGEMENT DECISION NOTE

SITUATION	Supplier B07 lead time and delivery reliability deteriorated while short-term coverage fell below the agreed buffer.
EVIDENCE	OTIF 82%, lead time 12 weeks, three open delays, 68% short-term coverage and one technically credible alternative.
RECOMMENDATION	Protect immediate demand with a controlled split allocation; validate the alternative; negotiate a capacity and call-off recovery plan; avoid full transfer until qualification and total-cost assumptions are confirmed.
DECISION REQUIRED	Approve validation cost, temporary allocation range and negotiation mandate.
FOLLOW-UP	Named owners, due dates, assumptions, approvals and supplier communication recorded.

WORKING RULE

I do not start with the tool. I start with the problem. The facts, responsible person and review point come first.

BUILDING TOWARD BROADER SOURCING RESPONSIBILITY

How I would build on day-to-day procurement to take on broader sourcing responsibility.

This is how I would build on documented buying, supplier follow-up, ERP discipline and production understanding when taking on broader sourcing responsibility. I have not held a formal Category Manager role.

SIX QUESTIONS FOR A BROADER SOURCING DECISION

01 Business need

What outcome matters, which requirements are fixed and what can be challenged?

02 Supply risk

How critical, dependent, complex and difficult to replace is the supply?

03 Beyond unit price

What do quality, logistics, inventory, working capital, lead time and switching cost add to the price?

04 Sourcing approach

Should the route be competitive sourcing, dual source, framework, development, consolidation or exit?

05 Review rules

Which terms, KPIs, review rhythm, owners, escalation paths and approval boundaries are needed?

06 Value after award

How will delivery, quality, cost, inventory, risk reduction and improvement be tracked?

LEADERSHIP IN PRACTICE

Delegated decisions

Handled routine sourcing and supplier decisions within delegated authority; exceptional or high-risk commitments were escalated with evidence.

Cross-functional coordination

Worked across Procurement, Engineering, Quality, Planning, Production, Warehouse and 30+ suppliers to keep priorities, risks and next actions aligned.

Repeatable control

Used grouped setup and validation checks to create or validate 200+ complex structures in about two weeks.

Continuity under pressure

Maintained critical supply and production-readiness follow-up for about three weeks during reduced team coverage.

PRACTICAL ADVANTAGE

I understand how a sourcing decision reaches the ERP record, the supplier commitment, the material plan, the quality evidence and the production consequence.
